

## Introduction

Thank you for your interest in the Intern position with Cotiviti. Applicants for this position will primarily be considered based on their performance in the following real-world demonstration of skills and abilities. Candidates who pass this performance-based screening will be invited to schedule an interview. Resumes and references will be reviewed in depth as a final step before a decision is made to offer a position. Please read the following prompt and instructions carefully and complete your submission of sample work product as instructed below.

## Prompt

Choose one of the following healthcare topics to research and analyze.

### Topics:

1. **Clinical Natural Language Technology for Health Care:** Past, Present, & Future Approaches, NLP, OCR, Computer Vision, LLM, LMM
2. **Clinical Decision Making and Pattern Recognition in Health Care:** Chain Reasoning, Agentic Generative AI, Classification, Prediction, Inference, Clustering, & Time-Series Anomaly Detection for Treatment, Payment, & Operations (TPO)
3. **Content Management in Health Care:** Billing and Coding Policies, Clinical Practice Guidelines, Payer-Provider Contracts, Summarization of Content, Comparison of Content Changes, Conversion of Written Policy into Programming Languages, Rules, Features, or Models

Be resourceful in choosing research sources, aids, and augmentations. Use ANY tools or technologies available. Be prepared to cite your sources and methods in an appropriate citation format in your deliverables.

## Deliverables

### Written Report

- Write a two-page report in Microsoft Word on the topic of your choice. Define the topic concept, analyze relevant trends, describe associated opportunities and threats, and propose one or more options for Cotiviti to explore as strategic investments, actions, or positions on the topic. Include your sources in a bibliography on a third page. Use MLA or APA format.

### Hackathon Proof of Concept

- Build a simple demonstrator prototype of your choosing using some technologies that are applicable to your chosen topic. You may attempt to showcase advanced technological skills in your demo, but you will be evaluated on how well you “hack” to prove a concept. Do not sacrifice speed and simplicity to overcomplicate the demo. Give a basic demonstration of some hands-on engineering to show the main functions, first principles, or general capabilities of the relevant technologies.

### Slide Presentation

- Create a Microsoft PowerPoint presentation with an overview of your report and POC.

### Video Recording

- Record a video of your PowerPoint presentation and screenshare of your working POC, including yourself on camera as presenter.

### Submission

Upload your Word document report, POC demo code, PowerPoint presentation, and recorded MP4 video to GitHub. Share your repository with [jesus.hurtado@cotiviti.com](mailto:jesus.hurtado@cotiviti.com) and send an email to the same address with the repository link and the title "INTERN" - your full name - the name of your college or university in the subject line, e.g. "INTERN - Joshua Uda – University of Utah"

### Evaluation

Candidates will receive no additional help or guidance beyond this prompt and will be evaluated on their ability to create the required deliverables with minimal guidance. Your written report will be evaluated on content, clarity, and conciseness. Your POC Demo will be evaluated on demonstration of basic technological competency. Your PowerPoint presentation will be evaluated on the quality of your slide deck organization, slide design, and visual aids. Your video recording will be evaluated on the quality of your vocal presentation and professional visual presence. There is no deadline for your submission; however, you will be evaluated overall on your responsiveness and ability to "satisfice" to maximize speed to value.

Thank you for your interest and participation!
